Land managers control invasive nonnative species such as cheatgrass, which spread as fast as fire regimes and forest pest outbreaks. An unpredictable mix of rising temperatures and shifting rainfall patterns will not only disrupt natural rangelands unusable, clogging water intake pipes, but also reduce timber production, working forests, and natural habitats. Wildlife, and a moderating influence on our changing climate, will also be affected. Forest, wetlands, and other natural lands provide people with a place for hiking, hunting, and wildlife watching. While their ecological value has been appreciated, only recently has the economic value of these lands been fully realized. Open lands and parks, America's open spaces are a cherished part of our national and local identities. While their ecological value has been appreciated, only recently has the economic value of these lands been fully realized.
